Personal Profile

Wyatt is a Software Engineer living in the San Francisco Bay Area. He is passionate about JavaScript, React and all things related to software development on the web. He builds UIs that are maintainable, reusable and scalable. Wyatt is flexible and able to work across the entire stack. He is a team player who enjoys working collaboratively to create amazing applications.

Work Experience

Software Engineer at thredUP
April 2017 – November 2017

Worked on the client-side React application for thredup.com. Worked in a fast-paced, cross-functional team using standard agile practices. Created UI components that were reused in multiple places across the site. Responsible for fixing cross-browser, cross-device UI bugs and refactored large sections of legacy code.

Technical Consultant at Salesforce/desk.com
November 2015 – April 2017

Built custom, full-stack internal web applications using JavaScript for the front and back end. Solved a variety of technical issues related to front end code and the Desk API. Wrote custom Ruby code to migrate new customer's data over to the platform. Front end development of Desk support centers using JavaScript, HTML, and CSS.

Web Development Immersive Student at General Assembly
April 2015 – July 2015

WDI (Web Development Immersive) is a 12-week full-time program that prepares students to become full stack web developers. I learned programming fundamentals, computer science principles, front-end development, back-end development, database technologies, working with teams and product development.
